

Build A HTML & CSS Only Landing Page (25 Points)

Due Date: 24th October, 2022 23:59:59

Project Description

1. Your challenge is to build out this landing page and get it looking as close to the design as possible.

2. You should name your HTML document as **index.html** in "2-blogr-landing-page-HTML-CSS-project" folder.

3. You are expected to use structure and semantic elements to properly markup your page.

So your HTML markup should contain at least these structure elements:

- **header** element
- **nav** element

- **main** element
- **footer** element

4. Your users should be able to:

1. View the optimal layout for the site depending on their device's screen size - this is to say your page should be **responsive** using **media queries** and other **RWD** techniques
2. See hover states for all interactive elements on the page

5. All the images and icons, are put in the **images** and **icons** folders respectively inside **assets** folder. The logo is also found in the images folder too.

You should maintain this organization and reference all the images, icons and the logo accordingly.
